

The Science, Art and Writing (SAW) Trust is an international science education charity that breaks down traditional barriers between science and the arts.

SAW workshops use scientific themes and images as a starting point for scientific experimentation, art and writing. Using the cross-disciplinary initiative, SAW offers an exciting approach to teaching science that harnesses children's natural curiosity and creativity.

What **saw** does

Lesson plans

Our lesson plans are adaptable and come complete with bespoke science, art and writing activities.

In-school workshops

SAW workshops last an entire school day and are suitable for up to 30 children. Sessions are led by real-life scientists, artists and writers. A range of topics are available, and we can also design workshops on new topics to suit your needs.

Festival workshops

We deliver workshops at a variety of public events such as festivals across the country. These workshops can be designed to accommodate participants as drop-in's or made bookable for groups.

Teacher training workshops

We run workshops at a variety of teacher conferences throughout the year. We also offer onsite CPD teacher training workshops in primary schools for all staff to learn the SAW methodology together.

For further information, or to discuss a workshop or project, please get in touch – we would love to hear from you!
